

WOOD BURNING HOT TUB

Experience a soak like no other. Our Wood Burning Hot Tubs are made in Canada with the highest quality construction and designed with deeply thoughtful design features. They're the easiest to set up, safer to use, and most comfortable to lounge in, allowing you to spend more time on what matters most—slowing down and finding a moment of pause.

Using only an armful of fallen limbs or brush to light a fire in the submerged stove box, our hot tub heats in just ~90 minutes for a back-to-nature soaking experience, with no chemical treatments or water testing needed.

DESIGN:

Crafted with care and consideration in Canada, our Wood Burning Hot Tub is made from enduring, durable, premium materials—marine grade aluminum and western red cedar. Thoughtfully designed with sustainability in mind and 100% recyclable, this insulated soaking tub is suited for hot or cold, saltwater or freshwater.

FINISHES:

NATURAL CEDAR

SOOT BLACK
